OCIMF single point mooring maintenance and operations ...

A single buoy mooring is a loading buoy anchored offshore, that serves as a mooring point and interconnect for tankers loading or offloading gas or liquid products. SPMs are the link between geostatic subsea manifold connections and weathervaning tankers. They are capable of handling any tonnage ship, even very large crude carriers where no alternative facility is available. In shallow water SPMs are used to load and unload crude oil and refined products from inshore and offshore oilfields or re
